OUR VISION

We aspire to create exceptional products that empower the user — embodying the feelings of exhilaration and liberty that come from skiing and the great outdoors to inspire creativity without limitation.

**NEW SEASON.
NEW LINES.**

Over time we continue to elevate our product collections, evolving as the riders do, searching for the perfect lines and features that will allow them to fully express themselves, no matter where the mountain takes them.

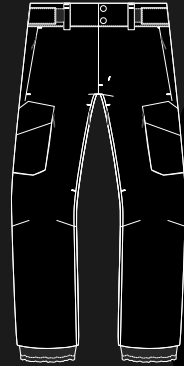

Our design ethos exists where elegance and functionality collide. We find beauty in subtlety and texture, and translate this into sophisticated, minimalist items. Sustainable materials and premium construction results in timeless pieces.

FABRICS & INSULATION

C1 FABRIC

A durable yet supple 55% bio-based/45% recycled polyester waterproof/windproof/breathable technical fabric available in two constructions - 2-layer/150g or 3-layer/180g. Developed to our exacting specifications, our C1 fabric features 20,000mm/20,000g protection and a PFC-free Durable Water Repellent coating.

C1 TECHNICAL FLEECE

We couldn't find a fleece that matched our requirements, so we developed our own. Our updated heavier-weight 300g, highly breathable, fast-drying, pill resistant, and moisture wicking C1 Fleece is made from 80% recycled material and 20% polyester.

PRIMALOFT® SILVER ECO™ INSULATION

PrimaLoft Insulators are made from 100% post-consumer recycled materials and are flexible, waterproof and lightweight. Designed for longevity, millions of air pockets form a thermal blockade, locking out the discomfort of harsh temperatures, protecting against extreme cold and stifling heat and are ideal for variable mountain weather conditions.

C2 FABRIC

An evolution of our standard-setting C1 fabric, our C2 fabric features a softer hand feel, lighter weight and mechanical stretch. Available in 2.5-layer/140g and 3-layer/160g versions, made from 58% bio-based/42% recycled polyester with industry leading 20,000mm/20,000g protection and a PFC-free DWR coating.

C2 TECHNICAL FLEECE

The C2 Fleece is a lighter weight, stretch variation of our C1 Fleece. Still offering optimal warmth, our 255g C2 Fleece is manufactured from 72% recycled polyester, 20% polyester, 5% tencel and 3% spandex/elastane.

PRIMALOFT® THERMOPLUME™ INSULATION

PrimaLoft® Insulation ThermoPlume® is manufactured from incredibly lightweight 100% recycled polyester silky fiber 'plumes' that collectively form a loose-fill insulation, mimicking the warmth and softness of natural down. ThermoPlume® is affected by moisture to a much lesser degree compared to natural down, so it keeps you warm even when wet - this also makes the material remarkably easy to wash.

LIGHTWEIGHT RIP STOP

Our lightweight, weatherproof, 55g rip stop face fabric is ideal for every day wear, made from 100% recycled polyester. It features a durable, water-repellent, PFC-free coating to protect you against inclement weather.

GLOBAL MERINO global merino

Lighter merino wool with greater strength, recovery and durability. Global Merino™ is a durable and breathable yarn made of 100% merino wool fibers. Completely natural, merino wool can absorb large quantities of moisture and quickly release it back into the air, keeping you warm and dry in all conditions.

We believe there is an everlasting link between nature and riders. We take measures to create products in the most eco-conscious way, and continuously look for new and improved ways to keep giving back.

To minimize our environmental impact, we work with organic, recycled and reused fabrics, and align our production process with these principles. With that in mind, we focus on performance and feel, to offer high-quality, comfortable products providing total freedom of movement.

BIO-SOURCED POLYESTER

In an industry first, refined crystalized sugar is extracted from sugar cane waste, fermented, and transformed into ethanol. This bio-ethanol is converted into bio-mono ethylene glycol (Bio-Meg) and extruded into a thread then weaved. This process generates 25% less CO2 emissions vs. traditional methods.

OEKO-TEX

All our fabrics and textiles are Oeko-Tex certified free of harmful chemicals and are safe for human use.

FIT

Our outerwear is designed to be unisex, comfortable, and multi-shape. Our mid-layers are true to size, whilst our outer layers are oversized.

For FW22/23 our outer layers have slightly been reduced - by half a size - to be more in line with market demand.

FOR ALL DAY RIDING. 100% MERINO WOOL.

The C1 BOTTOM is our Global Merino Wool™ thermal base layer pant for those long days on the mountain, no matter the weather conditions. Ideally combined with the C1 PANT of the coldest of days and the C2 PANT 3L on backcountry missions.
