**TWO YEAR
WARRANTY**

MATERIALS

C-LIGHT CORE

A strong yet lightweight core construction of paulownia and poplar wood, sandwiched between layers of fibreglass and carbon weave. The most durable, lightweight core we've seen in over twenty years manufacturing skis.

C-FREE CORE

A durable mix of ash and poplar woods, wrapped in fibreglass and carbon gives a responsive and tough ski full of pop.

CORUND TOPSHEET

A chip-resistant lightly textured top-sheet that protects against scratches to keep your skis looking fresh.

RESORT 101

BC 111

AK 121

ROCKWELL STEEL EDGES

Heat-treated steel built to last.

MAT TOPSHEET

A mix of satin and matte finish with a slight structure. A tough chip-resistant topsheet

AREA 91

AK 106

P-TEX 4000 BASES

The fastest, most durable production bases you can get.

FSC WOOD

The Forest Stewardship Council A. C. is an international non-profit, multistakeholder organization established in 1993 that promotes responsible management of the world's forests, via timber certification. All our wood core is FSC certified.

BIO-BASED EPOXY

Our factory has been pioneering the use of bio-based epoxy for many years. This replaces the petro-chemical with renewable materials such as vegetable oils. This process retains all the strength of a traditional epoxy resin.

SHAPE+ FLEX

TRIPLE RADIUS SIDECUT

A Candide first, our sidecuts feature three separate radii as you move from tip to tail. A tight tip radius makes turn initiation quick. A larger radius in the tail gives a powerful release to the turn and stability at speed. Finally, an even larger radius underfoot means wherever you mount it, the ski will feel consistent.

TAPER

The fatter the ski, the more taper we put from the tip to the tail to help the ski float in powder.

FLEX

We like our skis with a smooth flex over the length of the ski. Our Area and Resort ski has a softer flex to give better feel on piste and in the park, while our BC and AK skis have progressively stiffer flex to retain control and feel at speed.

CAMBERLINES+ MOUNTING

ROCKER

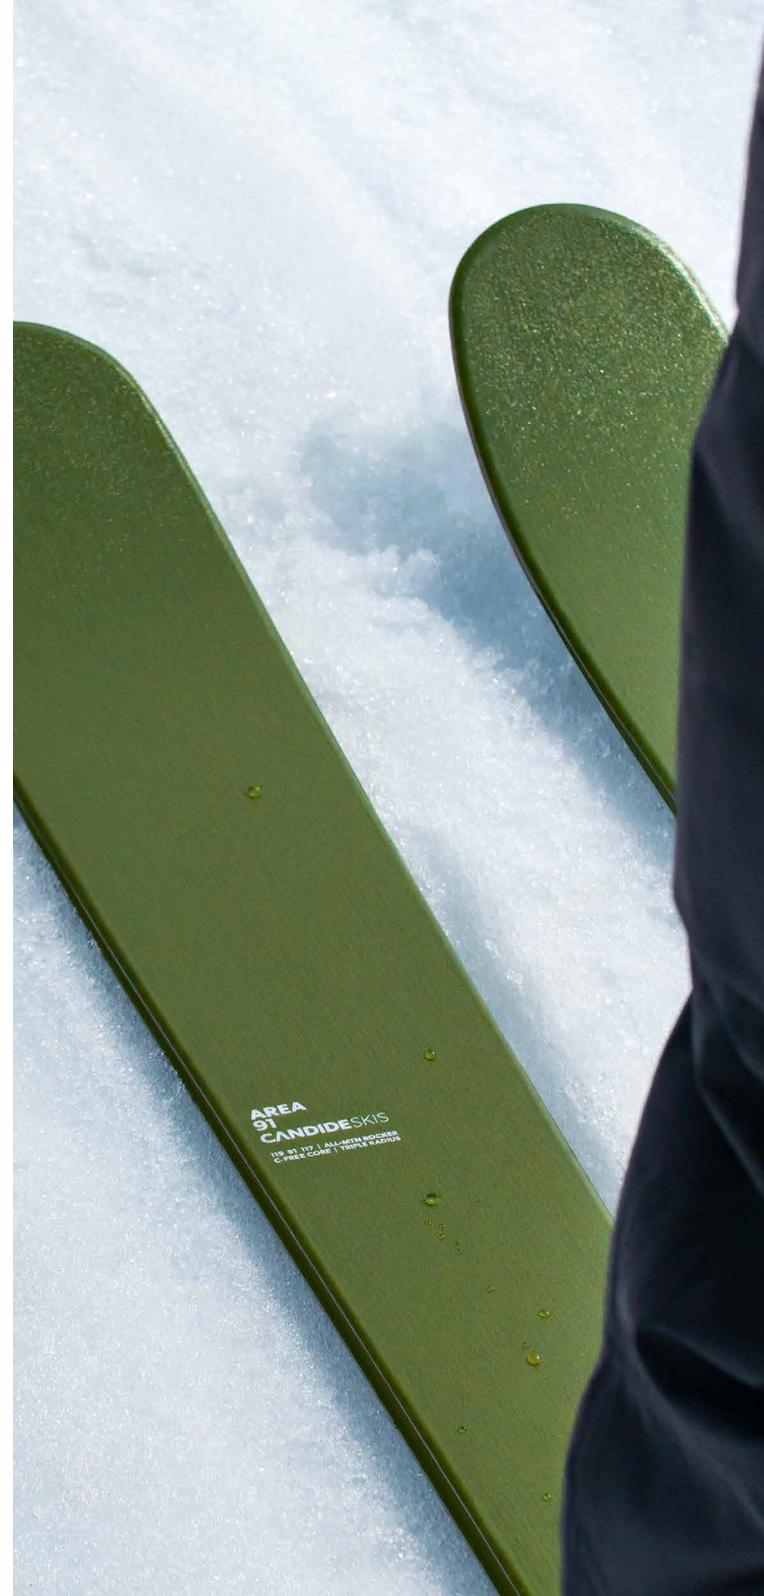

Rocker in the tip and tail helps a ski float off-piste. So, the wider the ski, the more rocker we've added. Our Resort ski has a small amount of rocker, the BC a healthy dose, and the AK a LOT.

CAMBER

Camber underfoot makes a ski responsive on piste, but harder to ski off-piste. So, our Area and Resort skis have the most camber, the BC a little and the AK none. Makes sense, doesn't it?

DUAL MOUNTING POINTS

If you've played with mounting your skis in different positions, you'll know what you like. For guidance, we've marked two positions on the ski - Candide's personal mounting point, and a 'Regular' mount point that suits most skiers and terrain.

AREA 91

C-FREE CORE

A durable mix of ash and poplar woods, wrapped in fibreglass and carbon gives a responsive and tough ski full of pop.

TRIPLE RADIUS SIDECUT

Three radii blended together for quick turn initiation, stability at speed and mounting versatility.

TIP RADIUS	17m
WAIST RADIUS	26m
TAIL RADIUS	19m

SINGLE MOUNTING POINT

Progressive.

ALL-MOUNTAIN ROCKER

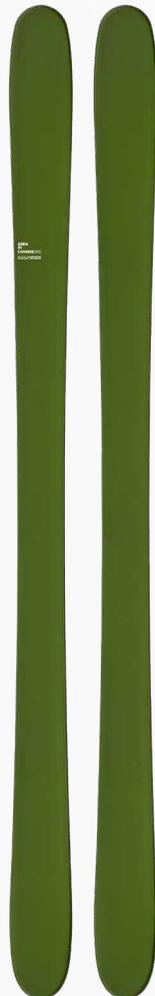

A little bit of tip and tail rocker with 2mm camber underfoot gives a responsive, lively feel all over the mountain.

EQUAL HEIGHT TIP+TAIL

Forward or switch.

All marked measurements are for 182cm.
